

Automating Regulatory Compliance and IT Best Practices Reporting

Security Reporting

Why Ecora Auditor Professional for Security Reporting?

Ecora Auditor Pro is the only solution to automate regulatory compliance and ITIL best practices reporting for IT Systems Management. Using Auditor Pro, organizations are able to audit and identify configuration changes in virtually all operating systems, database management systems, applications, and network devices. Auditor Professional collects over a million asset, security and configuration settings into a CMDB for reporting, auditing, baselining, and change tracking.

Agentless, non-invasive, and easy-to-use, Ecora's Auditor Pro solution is used by the Fortune 1000 to ensure effective IT systems control over the regulatory compliance and best practices areas of most concern to leading IT operations.

It's All About Security

Everyday, someone, on either side of a firewall, is looking for ways to exploit system vulnerabilities – challenging an organization's security and putting vital data at risk. If your organization is governed by regulatory requirements (e.g. Sarbanes-Oxley, HIPAA, GLBA, 21 CFR Part 11, FISMA), it's not just about cleaning up after a security incident. It's about reputation damage control, financial loss, and potential legal action.

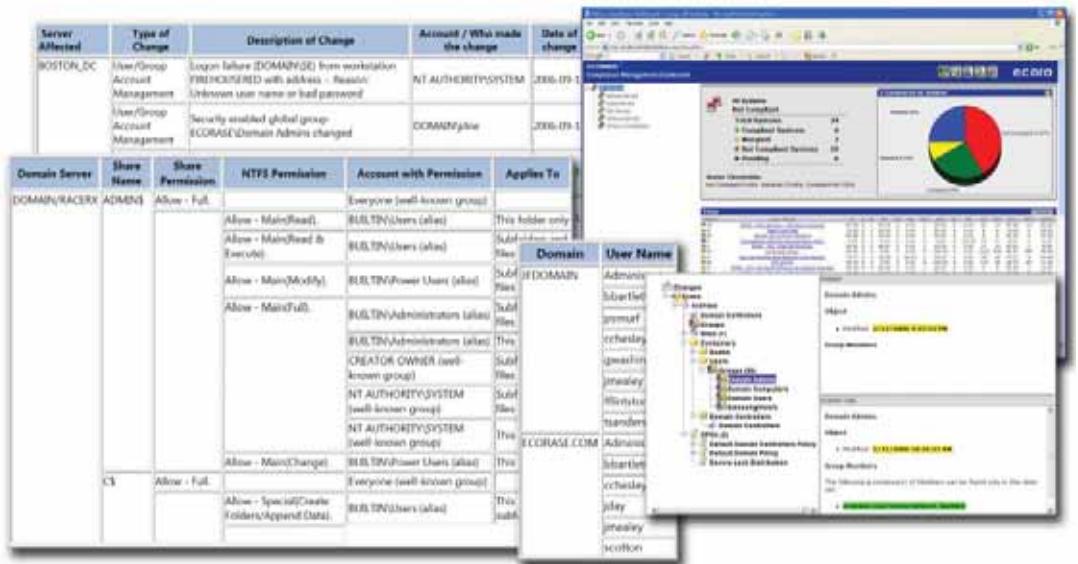

With a constant stream of Authorized and unauthorized system changes and unprotected access controls, managing IT security in a diverse system environment (servers, workstations, and laptops) is impossible without an automated, proactive approach.

The most popular security-specific reports found within Auditor Pro include:

- Password Aging
- User Privileges
- System Privileges
- Remote Access
- Consolidated Change Logs
- NTFS Permissions
- Role Permissions & Membership
- User Access
- Auditing Enabled

Ecora Auditor Pro Helps you Mitigate IT Security Risks :

- Generate audit-ready reports that demonstrate compliance
- Quickly evaluate policy compliance status with web-accessible executive dashboard
- Make changes to critical security configuration settings on individual or multiple servers from a single location
- Create and maintain standard configuration policies throughout your enterprise
- Control configuration drift to sustain compliance
- Identify incorrectly configured servers that create security vulnerabilities

Ecora's solutions provide hundreds of security-specific report templates and a policy-based dashboard for effective Security Reporting

"We've greatly improved our security with Auditor Professional by knowing who has access rights and alerting us to file size, checksum, and other system anomalies"

*- CIO and VP of IT
Milwaukee Journal Sentinel*

The Challenge

With a daily circulation of more than 258,000 and a Sunday circulation of about 434,000, the **Milwaukee Journal Sentinel** is Wisconsin's largest and most influential newspaper. In addition to the newspaper, JSOnline.com, the on-line complement to the newspaper, is the most heavily trafficked news and information web site in Wisconsin.

The Ecora Solution for Security Reporting

The Journal Sentinel's enterprise environment is heterogeneous with Windows and UNIX servers that run the newspaper's critical services, including circulation, advertising, email, web, and ecommerce. Keeping these systems secure was a must before for CIO Jim Herzfeld and his staff.

"When things change, problems can occur and vulnerabilities are exposed," stated Herzfeld. "It's inevitable that IT changes will happen and that's where Auditor Professional really shines. We're able to get day by day snapshot reports to prove changes happened as planned, and if not, we know exactly where the problem is so it doesn't effect security or uptime."

Because the newspaper business relies on the constant flow of outside information, Herzfeld describes it as "a collection ground for viruses." The Journal Sentinel is using Auditor Professional to efficiently manage system and Active Directory security settings. "We've greatly improved our security with Auditor Professional by knowing who has access rights and alerting us to file size, checksum, and other system anomalies," said Herzfeld. "With Auditor Professional, we have an easier time sleeping at night."

Ecora is the One!

Ecora's Auditor Professional helps provide solutions for Security Reporting and the six other areas of most concern to leading IT operations. Evaluate it for yourself—visit <http://www.ecora.com/auditorpro> for a no-obligation, free trial and join with over 1,100 active worldwide customers. Learn for yourself how customers are realizing such a significant savings that they have "achieved a return on investment many times over." It's time to step up to Auditor Pro and automate regulatory compliance and best practices reporting for IT Systems Management.
